Item: 4. ORAL COMMUNICATIONS - four people addressed the Board

SUGGESTIONS TO THE SANTA CRUZ COUNTY BOARD OF SUPERVISORS, 02/05/2003

By Howard A. Powers, Rejuvenation Engineer and representative for
World Improvement Technologies and Xogen Corporation.

I am here to tell you how you can make tremendous improvements in the health, fitness, well-being, longevity, productivity, prosperity and mobility **of all of the residents of Santa Cruz County**, without having to raise taxes or pass new legislation. All you have to do is use the latest and best technology in every department, program and project that is within the jurisdiction of Santa Cruz County. Probably you think that you are already doing that by hiring consultants and letting out contracts to reputable firms. Unfortunately, the consultants and the construction companies tend to use obsolescent technologies to insure that the project comes in on time and under budget.

Please let me give you an example - the proposed widening **of Route 1** from Route **17** to Freedom Boulevard, to provide express lanes in each direction, *so* that Silicon Valley commuters will not be held up during rush hour. Because all of the interchanges will have to be rebuilt, there will be even more disruption and delay of traffic, in the process. It will probably cost much more than it did to build the original Route **1** freeway. There must be a viable alternative.

Suppose that there were a tunneling machine that generated heat within itself to raise the temperature **of its tungsten nose** to about **3000 deg. F**, *so* as to melt it's way through the rock, gravel, **clay or** soil to form a waterproof, rocky lining for the tunnel, **as** it moves forward. The surplus magma would be sprayed with water to turn it into gravel, to be carried **out** of the tunnel by **a** conveyor belt. With one pass, this machine would create a finished, **ready-to-use** tunnel, at any desired depth, passing directly under buildings or roads without disturbing anything above. The technology exists to generate unlimited amounts of heat from the aether and/or the air behind the tunneling machine. **It is** this free energy that makes the technology practicable. World improvement Technologies can demonstrate the unlimited generation of heat, without recourse to fossil fuels, in their facilities. **An** expired, **1975** patent shows how to build this type of tunneling machine, originally for tunnels in the moon.

I believe that this type of machine is already available, somewhere. If not, it can be designed and built by a tunneling machine company, using the heat generating process that can be licensed from World Improvement Technologies. With this machine, one-way-tunnels could be created to supplement Route 1 wherever they would do the most good; for instance there could be a pair of tunnels between Scotts Valley, and Aptos; or another pair between Route 17 and Live Oak; or a pair from Summit Road, in a straight line, under the mountain to Soquel. Thus, Route 1 could be left exactly as it is now. Whenever traffic threatened to build-up again, another tunnel could be created. A pair of tunnels between downtown Santa Cruz and UCSC would be very useful. **How** about a pair of tunnels from downtown Watsonville, under the mountain, right to Gilroy?

Believe it or not, anti-gravity technology is now available to be applied to making bicycles and other vehicles lift off the ground and fly rapidly through the air, without propellers or jets. **No** more need for bike lanes!

World Improvement Technologies (WITs) is a leading-edge technology company, specializing in the fields of alternative energy and pollution remediation.

Established in **1988**, WITs is, perhaps, the foremost company, working to develop answers for today's complex energy problems. Having built tens of thousands of prototypes and developed dozens of available energy alternatives (everything from motors that run on gravity to engines that burn water) they are dedicated to getting us out of the mess we are in.

WITs is now worldwide, with multiple labs and top-notch scientists and engineers (many with advanced degrees). WITs has carefully sought-out the best scientists and engineers, in order to tackle challenging problems and provide realistic, practical solutions.

WITs has revolutionary technology, already developed and available, in the fields of pollution clean-up, control, prevention and remediation. There are over a dozen different technologies available in these fields, offering solutions to all current problems, i.e. air purification systems, water purification systems and systems for the conversion of trash/solid wastes to healthy **soil**. Most of these systems are available at less than standard costs for dealing with these problems.

The solutions are now available! You are hereby challenged to replace the old ways with the new. If you sit idly by and say, "Let George do it", you are supporting the problems instead of the solutions! **So** get involved! Together we can keep this world beautiful and bountiful for all time to come! (Roughly quoted from Timothy Thrapp, coordinator for North America – **1-330-262-4438**).

I also represent Xogen Power Company which has fully developed technology to crack water, at low cost, into hydrogen and oxygen and then burn them inside the engine cylinders to drive the pistons and exhaust only pure water.

In addition to representing WITs and Xogen, I (Howard A. Powers) am probably the world's, first, fully-rejuvenated, **78** year-old man. **I** believe that we are designed to live to about **150** years-of age, without aging or deteriorating, because all of our cells keep being replaced with brand-new ones, all put together, in perfect order, as regulated by our **DNA**. But, we have to Live a Perfect Life Style! (**A 12** step program) **I** am giving you my newsletters that show how anybody can rejuvenate, no matter how old or decrepit. Think of the good that we can do and the savings to the county that will follow, by teaching older citizens about rejuvenation by living **a** perfect life style!
